

Gravity X[®] INTRINSICALLY SAFE CAMERA

Do you need a user friendly point and shoot HD camera when you work in hazardous areas? This intrinsically safe digital camera is designed to help you take high quality images where no other cameras are allowed.

The Gravity X intrinsically safe camera is ATEX and IECEx Zone 1 and Zone 2, as well as CSA Class 1, Zone 1 (for US and Canada). The Gravity X also has 8 Mpix HD image sensors, a powerful LED light as well as sunlight readable display, Glove compatible touch and HD video recording capabilities.

Applications	Features	Benefits	Specifications
Oil and Gas	Three HD cameras	Use in low light/darkness	8 Mpix Full HD image sensors
Petrochemical	Powerful LED light	Easy media transfer to PC	4.3" sunlight readable display
Mining	Glove Compatible	Dedicated camera button	Waterproof, IP 68
Pharmaceutical	Light & user friendly	View media instantly	Wi-Fi & Bluetooth

User friendly and high quality

Full HD 1080 p video and 8 Mpix image capture, high end optics and super fast zoom and auto focus makes the Gravity X a very powerful product. The product enables high quality still image, audio and video capture in hazardous areas and immediately upload and store them to a network or computer. The camera also has a high capacity battery, fast auto focus lens and high resolution image sensors. The camera has an extremely light sensitive image sensor as well as a powerful LED light, enabling it to take great images in dark and confined spaces. The Gravity X intrinsically safe camera replaces the Xcorder EX4000 camera.

Your friend in the field

Ruggedized and Ex certified products have always been associated with low performance and outdated technology as well as bulky form factors. We wanted to change that! Our customers came to us and said they wanted the same performance and form factor in their rugged devices as they have in their consumer devices. They also wanted some additional features that no other camera has, and we made it happen. For example, the wake up time from standby is just 0.5 seconds, and the dedicated camera button allows the user to quickly and easily take images on the spot. The camera is fitted with a rugged strap mount for increased availability and dropped object safety.

« Revolutionary camera for image and video capture in hazardous areas. »

Video and Imaging centric

We designed the camera with touch industrial environments in mind, where battery lifetime, ruggedness, sunlight readability and camera performance are essential. To ensure that the product achieves professional grade photography, we decided to add a dedicated camera button. The button has a two step procedure where the AE parameters are set before you fire the shot, much like your DSLR camera.

Many camera apps available

The Gravity X ships with several camera apps and even more is available on various app stores. This allows the user to customize the camera and have more usage scenarios. For example, you can now have access to apps for remote triggering of images, timed images, landscape shots, time laps and many others.

FlipScope™

Did you ever wonder why many mobile videos are shown in a narrow strip in the middle of the video window on Youtube? The reason is that people want to hold their phone with one hand when recording videos. FlipScope solves this. Portrait mode or Landscape mode? It does not matter to Gravity X. Pictures will come out right whatever way you hold the device. The Gravity X changes to the second camera which is rotated 90 degrees compared to the other camera. You can now record landscape videos with one hand and have the other hand free.

Ergonomic features

The Gravity X was designed in cooperation with end users, and based on 13 years of experience within mobile devices for hazardous areas. First of all, the camera has a glove compatible touch screen and weight of only 290 grams which allows the users to bring the camera to any environment. The form factor is very attractive, it can easily fit in one hand, and inside a normal pocket. The camera also comes with a world's first feature, the FlipScope™.

Double battery capacity

The Gravity X is stuffed with advanced technology in order to offer the best possible performance in a very small form factor. Efficient processors ensures the lowest possible power consumption. We decided to add double the battery capacity compared to consumer devices. A 3000 mAh battery ensures many active workdays of power.

Immune to the elements

The Gravity X is ruggedized to an extent that makes it able to take almost any challenge the environment might throw at it. It is impact proof, drop proof, dust proof, corrosion proof and water proof and ability to withstand extreme temperatures. Special glass Sealing method to enable IP 68 Gorilla glass (2 mm thick) as well as a sunlight readable IPS Display.

Machined from Aluminium

The Gravity X chassis is machined from one piece of high quality Norwegian aluminium in order to provide the ruggedness and high quality feel the product deserves. It is designed in cooperation with offshore workers and descends from a long tradition of Ex certified products designed by BARTEC PIXAVI in Norway.

Android operating system

Nothing else makes sense. Android is the leading mobile operating system today. Android enables a high performance media framework and easy to use, intuitive interfaces. The operating system is quick, familiar, and customizable. Android is easily updated, secure and future-proof. There is a growing community of app developers, which allows for customizations and new functionality. You also have access to a wide range of value adding apps from various app stores. The Gravity X is a stripped down version of the Impact X, where we have removed the 3G wireless and SIM card capabilities to enable a lower price. We could easily have called it a mini-tablet, since it has all the same functionality as a Android tablet. The Gravity X does not have a SIM-card slot, and it can therefore be used where cellphones are not allowed.
